

SUPPLEMENTARY DATA

Supplementary Figure 1. Mean daily capillary glucose profile (pre-prandial and 2-hour postprandial) during first and last week of intensive insulin therapy in participants with percentage change in ISSI-2 <25% (Panel A) and change in ISSI-2 \geq 25% (Panel B). The black arrow on each graph indicates the magnitude of glucose oscillation.

Panel A: Participants with change in ISSI-2 <25%

Panel B: Participants with change in ISSI-2 \geq 25%
