

Supplementary Figure 1. Association of CAC Progression with Mean HbA1c during the study

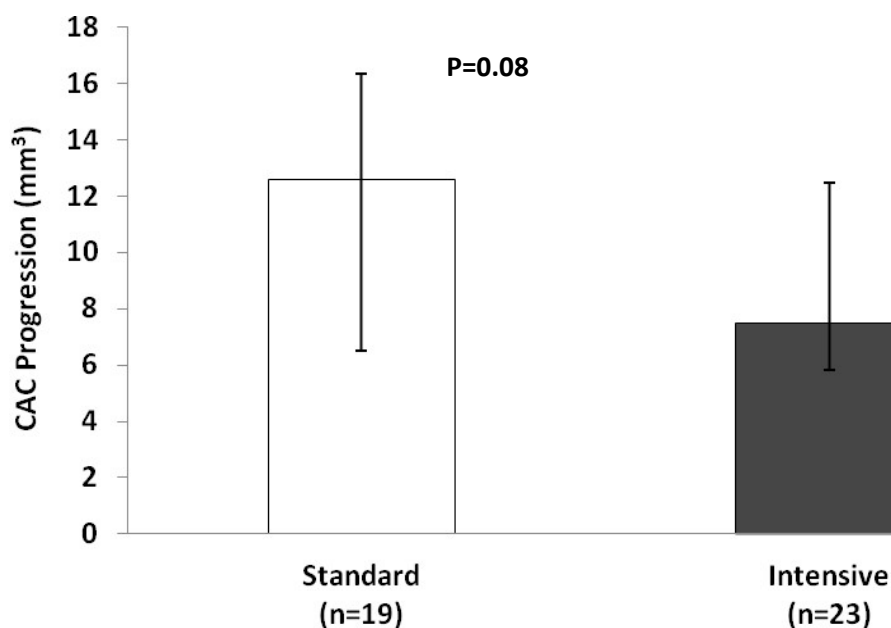

1A. Participants with serious hypoglycemia (n=97)

1B. Participants without serious hypoglycemia (n=100)

— Fit 95% Confidence Limits

SUPPLEMENTARY DATA

Supplementary Figure 2. Progression of CAC by treatment group in people with serious hypoglycemia matched by baseline CAC

□ Standard treatment group ■ Intensive treatment group

Median extent of progression of CAC is shown. Error bars represent the 75th percentiles. Participants were matched within 10% of their baseline CAC scores. Number of participants: Standard treatment group=19; Intensive treatment =23.
