

SUPPLEMENTARY DATA

Supplementary Figure 1. Summary results of the prospective plerixafor trial. For subjects with and without diabetes, changes in the levels of HSC and EPC phenotypes, as well as HSC colonies after plerixafor is reported as box and whisker plot, individual patient lines and fold-changes. In the bottom right lane, HSC mobilization after G-CSF treatment is shown. * $p < 0.05$ versus baseline or versus non-diabetic (for fold-change comparison).
