

SUPPLEMENTARY DATA

Supplementary Figure 1. Analysis of [¹⁸F]FDG uptake in subcutaneous and visceral WAT regions. (A) VOIs (1.33 cm³ per VOI) placed in the dorsolumbar subcutaneous WAT region near vertebrae L-3, as well as in the abdominal subcutaneous WAT region in the same transversal slice (total VOI volume both 8 cm³). (B-F) VOIs (1.33 cm³ per VOI) placed in visceral WAT regions: (B) the omental WAT region at the level of spleen and stomach; (C) behind the xipoid; (D) the paracolic WAT region; (E, F) the infrarenal WAT region, left (E) and right (F).
