convenience and comfort
for your diabetic patients

B-D

DIABETIC SUPPLIES

B-D Diabetic Supplies—needles, syringes and diabetic kits—reflect years of B-D research.

B-D Needles, designed for patient comfort, are precision ground for keenness, safety and uniformity. Provide easy penetration and hinder seepage and after-pain.

B-D Insulin Syringes. Individually calibrated and certified for accurate dosage—have scale markings baked into the glass and a *precision line* on the base of the plunger for easier reading.

Different scales and color markings are provided to simplify the administration of the different strengths of insulin.

Diabetic Injection Kit (No. 70), especially designed for convenience, holds either one or two bottles of insulin and is fitted with vials for alcohol and cotton, one Syringe STERITUBE[®] and two Needle STERITUBES. BUSHER[®] Automatic Injector can be accommodated by removing one vial.

B-D, STERITUBE and BUSHER, T.M. Reg. U. S. Pat. Off.

When Sugar is Contraindicated

...BUT THE PATIENT CRAVES SWEETS

LET your sugar-restricted dieters satisfy their craving for sweets, without adding to sugar or caloric intake. Recommend SUCARYL, the non-caloric sweetener that has the clean sweet taste of sugar, with no bitter aftertaste in ordinary use. A great variety of fully-sweetened dishes are possible with SUCARYL, because its heat stability permits use in all cooking, baking and canning processes without loss of sweetness. SUCARYL Sodium Tablets, in bottles of 100 and 1000; and SUCARYL Sweetening Solution, both sodium and calcium forms, in 4-fluidounce bottles.

..... **NEW RECIPE BOOKLET** now available for your patients.

To obtain a free supply, write Abbott
Laboratories, North Chicago, Illinois. **Abbott**

over

diabetes detection centers!

**"The ideal detection center is
the office of the family physician."¹**

Increasing experience in diabetes case-finding indicates that intermittent surveys and mass screening drives, although useful, have certain limitations. Getting and others,² in evaluating a community detection campaign (well publicized in the area), report that only 59% of persons accepting the free testing materials actually performed the test. Only 24% of those with positive results sought medical advice.

To find the estimated one million unknown diabetics³ and place them under needed medical care, the indispensable factor for success is the activity of the individual physician.

DIABETES DETECTION IN DAILY PRACTICE — a nationwide poll

To assist in the compilation of nationwide data on diabetes, gained through the experiences of private practitioners, Ames Company recently mailed a questionnaire to the medical profession. Your reply will become a vital part of a statistical study to be published on the results of this questionnaire.

Graham Lusk (1866-1932) was born in Bridgeport Connecticut and became a leader in physiological research in the United States. He studied chemistry at Columbia University and later received his Ph.D. in Germany, where he worked for several years with Carl von Voit. On his return to the United States, he taught physiology at Yale University, New York University and at Cornell University Medical School in New York City.

Doctor Lusk conducted many important experiments relating to carbohydrate metabolism. In 1912 he became the Scientific Director of the Russell Sage Institute of Pathology. He published over 150 scientific papers and either wrote or contributed to 12 scientific books, including his most important work "The Elements of the Science of Nutrition", which had a penetrating influence on medical research.

EDITORIAL SPECIFICATIONS FOR DIABETES

DIABETES is published by the American Diabetes Association, Inc., to provide an official Journal for the Association and to furnish the medical profession with information concerning diabetes and related fields of medicine. Its full title is "DIABETES—The Journal of the American Diabetes Association."

Contributions are invited from practicing physicians, clinical and laboratory investigators, and others who have data of importance to offer in this field. Manuscripts, if suitable, will be accepted provided that they are contributed exclusively to DIABETES. Papers presented at the Annual Meeting of the American Diabetes Association become the property of the Association, and the manuscripts must be submitted to the Secretary at the time of the Meeting. At the discretion of the Editorial Board they may be published in full, in part, or by abstract only. If only an abstract is used, permission may be granted on request from the authors to publish elsewhere.

Matter appearing in DIABETES is copyrighted. Permission to reproduce all or part of papers appearing in it may be granted on application, under appropriate conditions and if proper credit is given.

MANUSCRIPT SPECIFICATIONS. Manuscripts must be typewritten, double- or triple-spaced, with wide margins on standard 8½" x 11" paper. If possible, they should be submitted in duplicate.

Footnotes and bibliographies should conform to the following style:

For periodicals—Authors' last names, followed by first names or initials; complete title of article quoted from or referred to; name of periodical, abbreviated according to the list in the *Quarterly Cumulative Index Medicus*; volume number of periodical; complete pagination; and date (month, day of month, and year). Example:

Banting, F. G., and Best, C. H.: The internal secretion of the pancreas. *J. Lab. & Clin. Med.* 7:251-66, Feb. 1922.

For books—Authors' last names, followed by first names or initials; complete title of book; edition number, if any; loca-

tion of publisher, followed by publisher's name; date on title page of book; volume number, if work is in more than one volume; page number. Example:

Allen, Frederick M.: *Studies Concerning Glycosuria and Diabetes*. Cambridge, Harvard University Press, 1913, p. 461.

An abstract or summary of the content of the paper in not more than 250 words should usually appear at the end. If possible, this should be self-contained and understandable without reference to the text.

Photographs, drawings and figures should be suitable for reproduction purposes. Photographs should be unmounted, untrimmed glossy prints. In all instances, the names of authors should appear on the back. The top of photographs and figures should be indicated.

Galley proofs are sent to the principal author of each paper, with a price list and order blank for reprints.

All manuscripts and editorial correspondence should be addressed to the Editorial Offices, DIABETES, American Diabetes Association, Inc., 11 West 42nd Street, New York 36, N. Y.

Subscription and Advertising Information

DIABETES is published every other month. Members receive the Journal as part of their membership privileges. The annual subscription rates for non-members are as follows: United States, U. S. Possessions, Canada and the Pan-American Union, \$9.00 per year; elsewhere, \$10.00 per year. Individual copies, \$2.00 each. Correspondence concerning subscriptions should be addressed to the Subscription Department, DIABETES, American Diabetes Association, Inc., 11 West 42nd Street, New York 36, N. Y. Checks, money orders and drafts for subscriptions should be made payable to the American Diabetes Association, Inc.

All inquiries about advertising and other business matters should be addressed to the Executive Director of the American Diabetes Association. The publishers reserve in their full discretion the right to accept or reject any proposed advertising and the right to cancel any advertising contract.

DIABETES, The Journal of the American Diabetes Association, is published every other month by the Association at 11 West 42nd Street, New York 36, N. Y. Entire contents copyright 1953 by the American Diabetes Association, Inc.; all rights reserved. Entered as second-class matter at the post office, New York, N. Y., under the Act of March 3, 1879, as amended.

pure sweetness . . .

without calories

'Saxin' is prepared especially for diabetics, overweight persons, and those who can take little or no sugar.

'Saxin' gives a pure, sweet taste to all foods and beverages; it keeps its flavor when boiled or baked; even cooking with acid fruit does not alter its taste.

Freedom from metallic aftertaste is an outstanding characteristic of 'Saxin'.

'Saxin'[®] brand **saccharin**

Supplied in Bottles of 200 and 1,000
Each product is equivalent in sweetening power to one teaspoonful or one lump of cane sugar.

Burroughs Wellcome & Co. (U.S.A.) Inc., Tuckahoe 7, N. Y.

VIM.

...new fully automatic self-injector

Ideally suited for use by the nervous or inexperienced for self-medication with insulin.

The Vim Self-Injector is designed for use with standard syringes and needles.

1. Pull out plunger until it locks in position. **2.** Now insert syringe, with medication and needle — lower the regulating screw until it touches piston. **3.** Place Vim Self-Injector in position for use — press Release Button — The needle penetrates to the pre-determined depth and the medication is automatically injected. Send for descriptive folder.

A Valuable Library For Every Physician

*Now offered at a greatly
reduced price*

The *Proceedings of the American Diabetes Association* contain a great body of clinical information of practical use to every physician treating diabetes.

Now—Volumes 2 to 10 of the *Proceedings* are offered at a special price of \$39.50. Volume 1 is out of print.

We advise readers to reserve one of these sets before further individual volumes go out of print. For those who wish to complete their series of the *Proceedings*, we can offer separate yearly volumes at \$5.00 a copy.

Prepared especially— To help your diabetic patients

The A.D.A. FORECAST—"The Diabetic's Own Magazine"—is prepared and issued bi-monthly by the American Diabetes Association, under medical editorship, to provide authentic information about diabetes on a lay level. It contains:

Informative articles about diabetes by physicians

Instructive features on travel, insulin handling, etc.

Diet preparation, attractive recipes and food exchanges

Inspirational articles by and about successful diabetics

A Question and Answer department for readers

Reports of the Food and Drug Administration on misbranded remedies that are "Not Good for Diabetes"

"Dave's Diary", a warmly sympathetic chronicle of a diabetic's day-to-day experiences

The Funny Side—humorous anecdotes contributed by diabetics concerning their experiences, and numerous other features.

Many doctors feel that there are **FOUR** basic components in the treatment of the well-controlled diabetic patient: diet-insulin-exercise-and the A.D.A. FORECAST. You, too, will find that it can help your patients by furnishing them authentic information about their ailment.

If you are not acquainted with the FORECAST, we will be glad to send you a sample copy of the latest issue, or a supply of subscription blanks for your patients. Many doctors subscribe for one or more copies for their reception room.

The FORECAST is issued six times a year.
Subscription Rates: 1 year, \$2.00; 2 years, \$3.50; 3 years, \$4.75. **Gift Subscriptions:** Domestic, 1 subscription, \$2.00; 2, \$3.50; 3, \$4.75; additional \$1.50 each. Add 25c per year for subscriptions outside the United States and Canada.

Terramycin

BRAND OF OXYTETRACYCLINE

DEGREE OF CONTROL

***Better Control
for More Diabetics***

Striking improvement is shown in the control of 1,281 carefully studied diabetic patients who were given NPH Iletin (Insulin, Lilly) for comparison with prior Insulin management. Of the 1,281 cases, 522 were classified as severe, brittle, or juvenile; 562 as moderate; and only 197 as mild. Although no single modification of Insulin can be expected to meet all the requirements for all patients, results with NPH Insulin appear to be as good as, or often far better than, those obtained by other means.
