Clinical and Experimental Diabetes and Metabolism

Journal of the European Association for the Study of Diabetes (EASD)

Volume 36 Number 4 April 1993

Review

P. J. Randle

Glucokinase and candidate genes for Type 2 (non-insulin-dependent) diabetes mellitus 269

Originals

R. Kikkawa, M. Haneda, M. Togawa, D. Koya, N. Kajiwara, Y. Shigeta

Differential modulation of mitogenic and metabolic actions of insulin-like growth factor I in rat glomerular mesangial cells in high glucose culture 276

M. B. Grant, R. N. Mames, C. Fitzgerald, E. A. Ellis, M. Aboufrikha, J. Guy

Insulin-like growth factor I acts as an angiogenic agent in rabbit cornea and retina: comparative studies with basic fibroblast growth factor 282

S. M. Brichard, J. C. Henquin, J. Girard

Phlorizin treatment of diabetic rats partially reverses the abnormal expression of genes involved in hepatic glucose metabolism 292

N. E. Cameron, M. A. Cotter, E. K. Maxfield

Anti-oxidant treatment prevents the development of peripheral nerve dysfunction in streptozotocin-diabetic rats 299

M.-H. Giroix, A. Sener, B. Portha, W. J. Malaisse

Preferential alteration of oxidative relative to total glycolysis in pancreatic islets of two rat models of inherited or acquired Type 2 (non-insulin-dependent) diabetes mellitus 305

A. Kofoed-Enevoldsen, D. Noonan, T. Deckert

Diabetes mellitus induced inhibition of glucosaminyl N-deacetylase: effect of short-term blood glucose control in diabetic rats 310

F. Wasty, M. Z. Alavi, S. Moore

Distribution of glycosaminoglycans in the intima of human aortas: changes in atherosclerosis and diabetes mellitus 316

G. T. Westermark, L. Christmanson, G. Terenghi, J. Permerth, C. Betsholtz, J. Larsson, J. M. Polak, P. Westermark

Islet amyloid polypeptide: demonstration of mRNA in human pancreatic islets by in situ hybridization in islets with and without amyloid deposits 323

C. M. Ryan, T. M. Williams, D. N. Finegold, T. J. Orchard

Cognitive dysfunction in adults with Type 1 (insulin-dependent) diabetes mellitus of long duration: effects of recurrent hypoglycaemia and other chronic complications 329

M. Stoffel, R. Espinosa III, S. R. Keller, G. E. Lienhard, M. M. Le Beau, G. I. Bell

Human insulin receptor substrate-1 gene (*IRS1*): chromosomal localization to 2q35-q36.1 and identification of a simple tandem repeat DNA polymorphism 335

J. Delarue, S. Normand, C. Pachiaudi, M. Beylot, F. Lamisse, JP. Riou

The contribution of naturally labelled ¹³C fructose to glucose appearance in humans 338

P. Fasching, K. Ratheiser, P. Damjancic, B. Schneider, P. Nowotny, H. Vierhapper, W. Waldhäusl

Both acute and chronic near-normoglycaemia are required to improve insulin resistance in Type 1 (insulin-dependent) diabetes mellitus 346

D. Blum, H. Dorchy, T. Mouraux, E. Vamos,

Y. Mardens, A. Kumps, C. De Prez,

P. Heimann, B. Fowler, R. Baumgartner,

L. Bouwens, J. Van Gompel, G. Klöppel

Congenital absence of insulin cells in a neonate with diabetes mellitus and mutase-deficient methylmalonic acidemia 352

Rapid communication

I. Conget, J. Fernández-Alvarez,

J. Ferrer, Y. Sarri, A. Novials, N. Somoza,

R. Pujol-Borrell, R. Casamitjana, R. Gomis

Human pancreatic islet function at the onset of Type 1 (insulin-dependent) diabetes mellitus 358

L. Bent-Hansen, B. Feldt-Rasmussen, A. Kverneland, T. Deckert

Plasma disappearance of glycated and non-glycated albumin in Type 1 (insulin-dependent) diabetes mellitus: evidence for charge dependent alterations of the plasma to lymph pathway 361

For debate

B. H. Robinson, H.-M. Dosch, J. M. Martin, H. K. Åkerblom, E. Savilahti, M. Knip,

J. Ilonen

A model for the involvement of MHC class II proteins in the development of Type 1 (insulin-dependent) diabetes mellitus in response to bovine serum albumin peptides 364

Letter to the editor

T. L. Paul, I. M. Hramiak, J. L. Mahon,

D. Freeman, P. Atkinson, D. T. Finegood,

J. Dupre

Nicotinamide and insulin sensitivity 369

Book review 370

A JOURNAL OF
THE AMERICAN
DIABETES
ASSOCIATION.

For ongoing news of the DCCT and its implications for diabetes treatment

The results of the Diabetes Control and Complications Trial (DCCT) may be released soon. This trial should provide a definitive answer to the question of whether tight control of blood glucose levels can prevent or delay the onset of diabetes complications. It may have important treatment implications for physicians and other health professionals who treat people with diabetes.

Watch upcoming issues of *Diabetes* for more information and analysis of the trial results.
